

# IntelliB/OSS Retail Edition

## Reliably Scaling Business and Operations Support Systems

IntelliB/OSS' reliable and scalable engines for business and operations management for tier 1 & 2 carriers, enterprises, and government entities can support front and back office operations within a single platform. IntelliB/OSS satisfies simple to complex OSS/BSS needs, ranging from those of single service carriers (e.g. telephony) to fully converged bundled service providers (e.g. voice, video, data, and content).

## Consolidating Business and Operations Support Systems

IntelliB/OSS provides key business support system solutions, such as Rating and Taxation Engines, traditional and Electronic Billing and Payment Processing Engines, Basic and Advanced Customer Care Engines, Issue Management (incorporating trouble tickets, work orders, workload balancing, and more). IntelliB/OSS' operations support systems functionality spans six broad categories: AAA, Mediation, Provisioning, Traffic Analysis, Network Management, and Notifications.

As a set of consolidated OSS/BSS solutions, IntelliB/OSS presents an unique value equation to organizations seeking to streamline front and back office operations.

## Making Back Office Operations Easy

IntelliB/OSS back office features include, but are not limited to creating **Invoices and Reports** for Subscribers, Agents/Resellers, Service Providers, Employees, and/or Departments; **Management Reports**, which are generated on-demand or as scheduled and delivered in a variety of formats; **Notifications/Alarms**, which provide real-time notice of network issues, and finally, **Synchronization with Financial Systems**.

## Comprehensive Reporting

Whether a networking professional, an end user, or an executive, one of the most vital tools available for day-to-day management is a clear, current, and concise view of operations in the form of one or more reports.

IntelliB/OSS provides over 300 reports. Reports can be customized and new reports can be developed to meet unique needs. Filters may also be applied to existing reports, to only show desired information on a given report. Reports can be printed, previewed, exported (PDF, ASCII, RTF, HTML, CSV, Excel XML, BMP, GIF, JPEG, TIFF, etc.), emailed, or published to an FTP server. Reports may also be scheduled for future generation on a one-off or a recurring basis.

## Interoperability

Network elements, such as Switches, Gateways, Media Servers, SMS/IMS Servers, etc. accounting records that IntelliB/OSS can process real-time or in batch. IntelliB/OSS supports over 700 accounting record formats, with the ability to quickly add new formats.
