

# IntelliB/OSS Wholesale Edition

## Scalable Wholesale & Clearing House Billing and Settlement

Few factors matter more in communications wholesale and clearinghouse environments than scalability and availability. The IntelliB/OSS Wholesale System offers highly available and scalable OSS/BSS engines, enabling wholesale and clearinghouse operators to:

### Mediate OSS/BSS Data

For billing applications, IntelliB/OSS aggregates, correlates, and even generates network usage accounting data. When interfacing with other operations support systems (OSS), IntelliB/OSS mediates operational data to facilitate network management, network maintenance, and even network provisioning tasks. Billing data and other OSS data can be captured and processed in real-time or in batch, depending on availability of data from third party platforms.

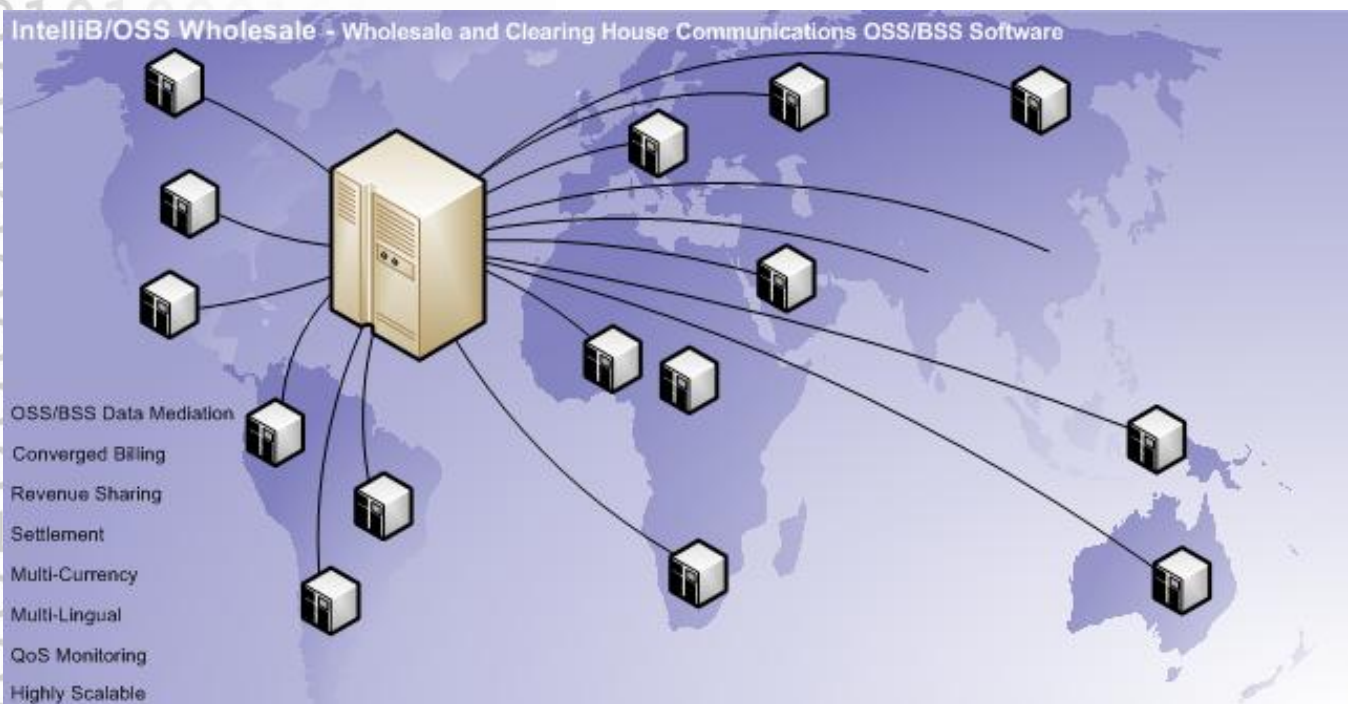

### Consolidate Mediation and Billing

With IntelliB/OSS, mediation and billing for all service types (voice, video, data, and/or content) may be consolidated under a single platform.

In the communications industry, service providers must deliver multiple, ever evolving service options. Convergence of mediation and billing for voice, video, data, and content services under one platform becomes a priority. IntelliB/OSS provides wholesale carriers and clearinghouses tier 1 grade OSS/BSS solutions for all imaginable communications service types.

### Settlement and Revenue Sharing

Build out unlimited usage, event, or flat fee rates to support an infinite number of contract arrangements for partners and customers. Also build out rates utilizing service level agreements, to change applicable rates based on actual Quality of Service levels delivered to partners and customers. Manage revenue sharing, and settlement and bill reconciliation between partners.

## Provision Services

When using IntelliB/OSS' optional Provisioning Engine, carriers may automatically provision customers and partners services on the networks. Partners and customers anticipate services being enabled within minutes from the time of order, IntelliB/OSS empowers carriers to meet this expectation with its optional Provisioning Engine module.

## Manage Inventory

Track and manage in-house and customer/partner premises equipment and assets with IntelliB/OSS' optional Inventory Management module. Whether managing in-house or remote inventory, IntelliB/OSS' optional Inventory Management module enables wholesale and clearinghouses operators to effectively manage both physical and intangible assets.

## Enable Self-Care

Partners and customers can manage their accounts via the web when using IntelliB/OSS' included web interface. Partners and customers can view account details, usage histories, service and product offerings. Partners and customers can also invoices, submit service requests, provision new services, and much more.
